 Production Area Air Conditioning
 Data Centre Cooling/ Close Control
 Disaster Recovery Stand-by

TEMPORARY SPACE COOLING RIGS

Cooling Capacity: 50-300Kw

Completely self contained space cooling hire rigs, featuring water chillers and Airedale close control fan coil units.

These versatile systems are suited to all large scale temporary space cooling applications, including amongst others, exhibitions/ events, film sets, marquees/ temporary structures, data centres and factory production areas.

The fan coil units feature high pressure scroll fans, which, along with flexible ductwork get the air to where you need it reducing hot spots. The fitted filters and high air turnover/ movement ensure a cooler cleaner environment with less dust.

The complete system can be centrally controlled from a laptop with simple to understand graphics. System status can be viewed and controlled as required from this point with one button control of temperature set-points and functions such as Air Dumping. Very close control of the working environment is possible in this way.

Features:

- High volume air movement reduces hot spots.
- Fully computer controlled for ease of use and close temperature control
- Air Dumping and filters clean the air removing dust/smoke

Applications:

- Film sets, large events, Marquees- climate control, exhibitions.
- Data centre disaster recovery- Additional temporary cooling.
- Temporary refrigeration of structures and spaces.
