

Manufacturer: Carrier
Model: 30GX 207
Cooling Capacity: 705Kw

Classic Carrier machines combining innovative design, high build quality and ultimate durability.

A Carrier 30GX chiller

These machines are suitable for most applications including low temperature refrigeration and ice making. Their compact size and light weight makes them easy to transport and locate in confined areas, suiting them to temporary cooling installations where a portable, compact, powerful machine is required. Sophisticated controls allow them to adapt to all conditions- they keep running!

The high speed Carrier 06NA compressor

Features:

- Two independent refrigeration circuits using screw compressors
- Environmentally friendly R134a refrigerant used.
- Portable compact size and light weight for easy installation

Applications:

- Process and building cooling including data centres.
- Low temperature refrigeration and ice making.
- Base plant for portable space cooling systems.
